Ongoing and Potential Future Projects in the Midleton Area

This poster shows the ongoing and potential future infrastructure projects in Midleton that interact with the flood relief scheme. They are being progressed by other departments within Cork County Council, Irish Water and Irish Rail. We have been engaging with the various project teams throughout the development of the emerging preferred option. This engagement and consultation will continue through the planning and detailed design stages of the flood relief scheme so as to integrate it into the overall development of Midleton, with a particular emphasis on improvements in the areas of amenity, environment and biodiversity.
