

Archaeology, Architectural and Cultural Heritage

One of the objectives of the constraints study is to identify all known archaeological monuments, protected architectural structures and other features of cultural heritage significance within the scheme area. This serves to inform the design team of all relevant heritage constraints.

Limerick is rich in archaeology, architecture and cultural heritage features. Its unique heritage contributes to the county's identity and sense of place. It is important that proposed solutions recognise and respect this heritage.

There are over 400 RMPs (Record of Monuments and Places), SMRs (Sites and Monument Records), RPSs (Record of Protected Structures) within the scheme area. The time periods of these monuments span from prehistoric to modern periods
